Spektrum™ Dashboard Change Log

2025 April 16

Android Version 23.05

All changes are relative to version 23.03.

Corrections & Improvements

- Removed the permissions popup, as it was redundant to the Android OS version.
- Corrected the time window formatting in the Basic Setup screen.
- Fixed Dashboard sticking to one telemetry display type regardless of actual setting when connected to a Promoto.
- Fixed a crash reading firmware update files if the user didn't grant a permission that wasn't needed.
- Removed the Model Setup tab.
- Added a Bluetooth permissions check before opening the Bluetooth Devices screen.
- No longer request the camera and picture permissions, as those were only used for the Model Setup tab.
- Added support for the DX3 MT.
- Updated the DX3 firmware to 1.11.11.

iOS Version 11.0

All changes are relative to version 10.0.

Corrections & Improvements

- Removed the "Displayed?" property from the telemetry settings.
- Removed the social media integration, as it has been deprecated for some time.
- Corrected the Aux Point screen's position slider range.
- Corrected the background color of the Aux Point screen.
- Corrected the background color of unused Bluetooth Devices screen lines.
- Made the controls in the Telemetry Setup screen easier to use.
- Corrected Imperial and Metric unit labels when the setting changed.
- Fixed long-tapping gauges on the expanded SMART panel view so the application would go to the correct screen.
- Fixed an issue where the Status screen would disappear after a BLE connection.
- Added a way to close the keyboard after entering text without closing the current screen.
- Removed the Model Setup screen.
