GUNDERSON HUSKY-STACK® 48' WELL CAR

PLEASE NOTE:
NOT ALL PARTS SHOWN ARE
APPLIED TO ALL MODELS. ONLY
THOSE PARTS APPLICABLE TO
THE PROTOTYPE ARE INCLUDED
WITH THE FINISHED MODEL.

These cars are very accurate models of the real Husky Stack cars and, as such, bring with them some of the operating restrictions of the prototype. The cars are very low and long and, on tight radius curves, must have extra clearance allowances. These cars will operate on 18 inch radius curves, but the curves must have proper easements at both ends. (Drawbarred versions will operate over a 20 inch radius with proper easements at both ends)

Remember an 18 inch radius in HO is very close to a 30 degree curve in prototype and a 20 inch radius is equal to about 26.5 degree (a 36 inch radius is close to 15 degree which is about as tight as a real railroad uses for very slow order shoo-fly tracks)
